American Traders Lightweight Wooden Canoes									
Model	Material	Length	Beam	Weight	Capacity	Keel	½ Ribs	Usage	Price
Feather	Wood/Epoxy	14'	36"	49lbs.	550lbs.	Standard	Standard	CR/DT	\$2990

- This lightweight model uses epoxy to fasten the red cedar planking to the ribs. Stable, lightweight & beautiful, the 14' Feather is one of our top sellers.

Canoe Specifications									
Overall <b>length</b> is measured stem to stern in feet and inches. <b>Beam</b> measurement is taken inside the hull at the widest part, in inches. <b>Weight</b> in pounds is determined on a standard model, extra options would add weight. As each canoe is handcrafted, weights may vary slightly. <b>Capacity</b> also measured in pounds to six-inch freeboard at center of canoe.									

American Traders recommends the use of an approved personal floatation device (life vest) when you are in the water.

## Types of Wooden Canoes

**Wood/Canvas** – The most traditional type of canoe covering, these canoes are a lot more rugged than the name implies. Because the canvas is not permanently bonded to the hull, 20-25 years down the road these canoes can be restored to their original condition by re-canvassing. More resistant to abrasions, wood/canvas models are best suited for wilderness tripping and down river paddling.

**Wood/Epoxy** – Often referred to as “wood glass” canoes, these craft are built using the same traditional method as wood/canvas. However, instead of canvas they use a clear bonded epoxy on the outside of the hull. There is an invisible layer of fiberglass cloth between the wood and epoxy so that the natural beauty of the wood is visible on the outside. The entire canoe is then varnished. Lighter weight and easy maintenance are two advantages of wood/epoxy construction. Best suited for lakes, ponds, and deep rivers.

## About Our Canoes

**American Traders Wooden Canoes** – Built to exacting standards by our master canoe builder, Alain Rheume, these wooden canoes represent some of the finest quality and workmanship of any canoes on the market today. Winner of the Citation for Excellence Award by Wooden Boat Magazine.

**American Traders Feather Canoe** – Built exclusively for American Traders by Roger and Yves Pasquinel, who continue a fine family tradition of lightweight and aesthetically beautiful canoes. Instead of brass tacks, these canoes use a permanent bond epoxy to hold the planking to the ribs.

## Canoe Usage

**CR – Casual Recreation Canoes** – Best design for all purpose paddling on flat water. Good family recreational boat. Generally stability is featured above performance.

**CS – Cruising Canoes** – High-performance, medium-volume flat-water boats built to maximize speed and hull efficiency. They are a good choice for the skilled paddler who enjoys moving a boat across the water as much as reaching the destination. They are fast enough to give the paddler an aerobic workout.

**DR – Down-river Canoes** – Not white water canoes, but because of their rugged construction and rocker can handle class 2 or 3 rapids when paddled by an experienced paddler. These canoes are quick and responsive and capable of handling a moderate to heavy load.

**DT – Day Tripper / Weekend Canoes** – Medium-volume canoes meant to carry two paddlers and a weekend’s worth of gear – about 600lbs. They’re lightweight and fairly quick on the water.

**SP – Sportsman Canoes** – Used most frequently for hunting and fishing. They’re designed to be stable, rugged platforms for carrying sporting equipment. Good choice for paddlers whose primary concern is stability.

**SY – Specialty Canoes** – Canoes that don’t fit neatly into any category, such as historical replicas or other unique styles of canoes and rowboats. Canoes that may be best suited for display would also fit into this category.

**TR – Touring Canoes** – Long, slender, and generally faster than canoes for casual recreation they have medium to high volume and perform best underway on flat water but are versatile enough for easy current.

**WT – Wilderness Tripper Canoes** – Rugged construction and high capacity, these versatile canoes are good for extended canoe trips in remote wilderness areas.

Canoe categories represent suggested uses for different canoe models.  
Few canoes fit perfectly into any one category.

### PRICES

All prices shown are valid through August 30<sup>th</sup>, 2008. American Traders is continually improving our products and we reserve the right to change our product prices & specifications at any time.
